

KEYSTONE
RV COMPANY

CAMP BETTER

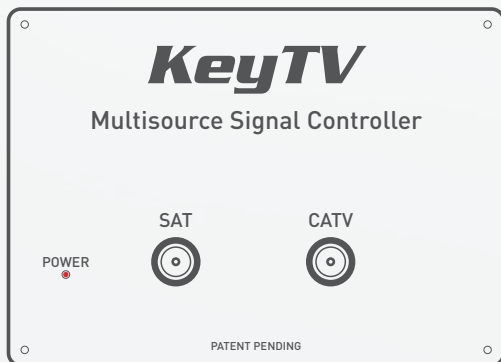

Keystone RV's **EXCLUSIVE**
single-point control system
for over-the-air, cable and
satellite television.

QUICK START GUIDE

Congratulations on your new Keystone RV, equipped with KeyTV[®], a revolutionary new system that radically simplifies RV television operation and improves signal quality.

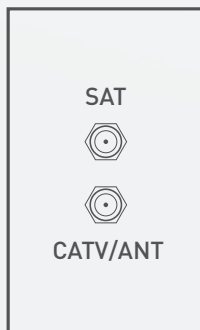

KeyTV works seamlessly with cable service and all major satellite providers without the need to run separate wiring to television monitors.

1

(1) KeyTV Multisource Signal Controller

This is where you connect your cable TV and/or satellite service. The Key TV controller is found on your vehicle's exterior, either in the convenience center or in a small compartment on either the non-door side or rear wall of the trailer.

2

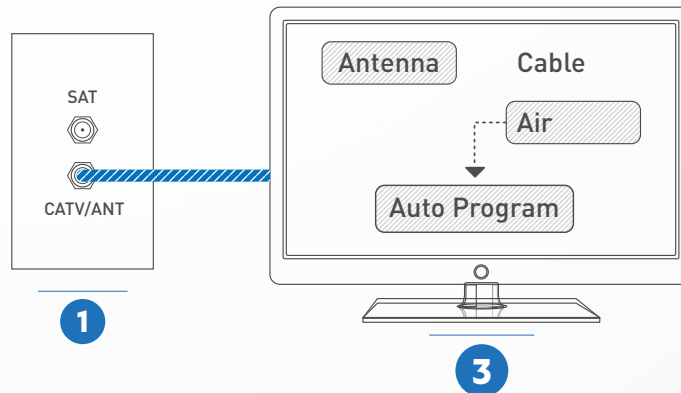

(2) Monitor Wall Plate(s)

Located behind each television monitor.

TO WATCH OVER-THE-AIR TELEVISION

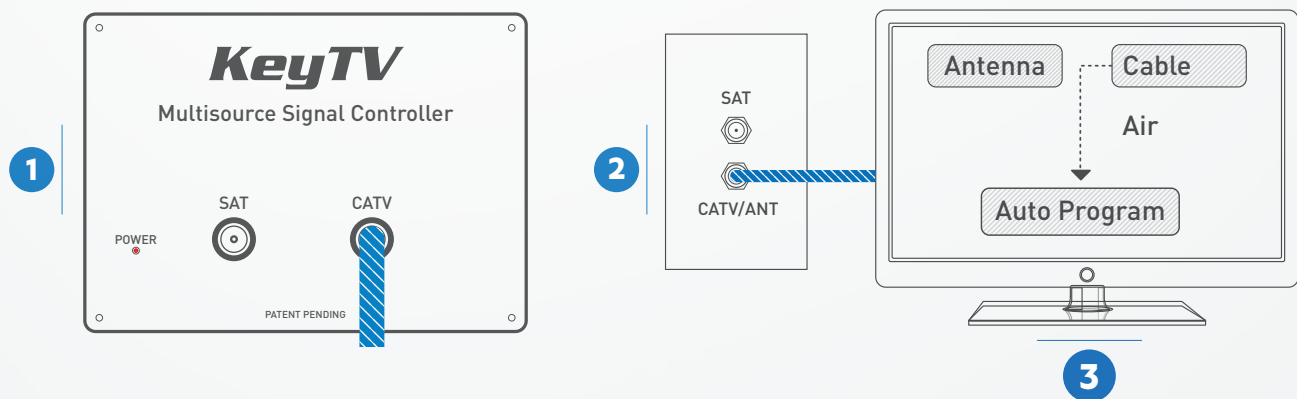

- (1) Connect television to the "CATV/ANT" port on the wall plate with a coaxial cable.
- (2) Turn TV on.
- (3) For most television sets, go to the menu, select antenna (usually "ANT") input and run auto-program to program viewable channels.

Note: To watch over-the-air channels, make sure that cable service is not connected to the KeyTV Multisource Signal Controller.

TO WATCH CABLE TELEVISION

- (1) Connect Cable TV service to the KeyTV Multisource Signal Controller's "CATV" port. (Located on your vehicle's exterior.)

- (2) Connect television to the "CATV/ANT" port on the wall plate with a coaxial cable.
- (3) Turn your TV on. For most television sets, go to the menu, select cable (usually "CATV") input and run auto-program to program viewable channels.

Note: If cable service is weak or compromised (-50 dBm or stronger required), KeyTV will automatically switch your feed to the over-the-air channels. For over-the-air viewing, disconnect cable from the exterior KeyTV signal controller.

TO WATCH SATELLITE TELEVISION

- (1) Connect coaxial wire from the satellite dish's main port to the KeyTV Multisource Signal Controller's "SAT" port. (Located on your vehicle's exterior.) Most portable systems require this coaxial wire to be 25 ft. or less for proper satellite operation.
 - Please refer to your satellite equipment product manual for satellite receiver and television set up.
- (2) At the television monitor, connect satellite receiver to the "SAT" port on the wall plate with a coaxial cable. Then, connect receiver to the television with an HDMI cable.

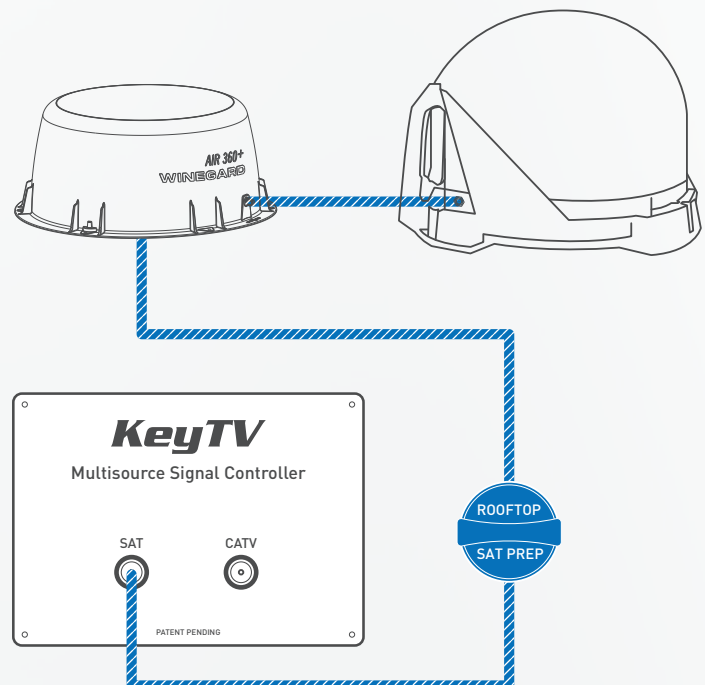

ROOF MOUNT SATELLITE PREP

Just plug and play.

Many Keystone RV models feature an exclusive satellite pass-through on the Winegard Air 360+ antenna.

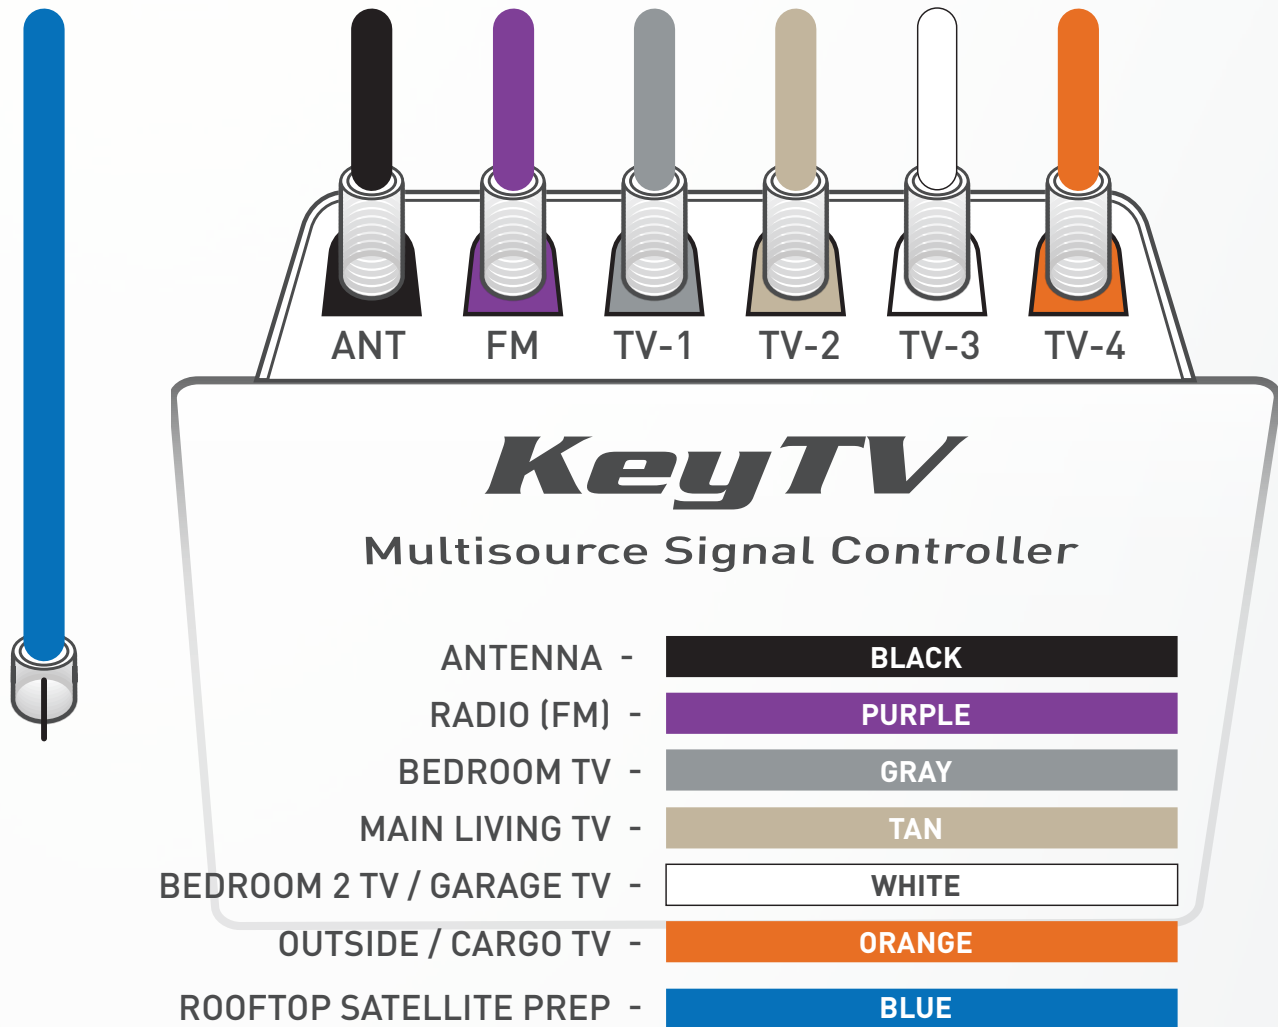

- (1) Connect roof-mounted satellite receiver to the port on the side of your RV's antenna.
- (2) Next to the KeyTV controller, there is a blue "rooftop satellite prep" cover. Remove this cover to connect the satellite feed cable to the "SAT" input on the controller.

Note: With portable systems, you will be able to watch satellite program on any one television. Compatibility diagrams are available from Keystone Customer Service.

KEYSTONE'S EXCLUSIVE COLOR-CODED WIRING STANDARD FOR KeyTV

Each monitor's wall plate connects directly to the KeyTV Multisource Signal Controller with a color-coded coaxial cable. Should an issue arise, check to make sure the connection is tight at the wall plate and at the corresponding connection on your KeyTV unit. If further service is required, the color-coded cables make it easy to locate and correct any issues.

Applications with 5 TV locations require the replacement of the factory installed splitter located between TV 4 & TV 5 with an approved satellite providers splitter.

FREQUENTLY ASKED QUESTIONS

My cable is snowy or the reception is poor, what's up?

At some campgrounds the strength of the cable service can get diluted the further your site is from the source or with bad weather. If you're having an issue make sure your cable signal is at least -50 dBm or stronger. KeyTV was developed without splitters or jumpers in order to give you the best possible picture.

What satellite providers are KeyTV compatible with?

KeyTV is fully compatible with DISH® Network and DirecTV® in the U.S., Shaw Direct and Bell in Canada.

My dealer has suggested running separate wiring for my satellite system, do I need that?

You don't. By running a single line from the controller to each monitor wall plate, KeyTV eliminates the wiring complexity that sometimes resulted in poor satellite reception.
